The Battle of Neighborhoods

Isaac Shahar

Business Problem

- Investors from all over the world are looking for assets to buy and they are willing to make good and smart decisions. The value of an asset is affected by many factors and therefor potential investors are looking for capabilities to perform data analytics in order to extract actionable insights.

Objective

- Analyze london's real estate market in order to extract insights and provide investors and other potential stakeholders with the capability to better evaluate assets and areas

Resolution

- Create Python script while utilizing data science technics and practices

- Combine external tools to enrich data

- The user choose budget, and then being provided with streets that meet the limitation

- The user may also use Foursquare to explore these areas
